

34. The method according to claim 28, wherein the communication result file is stored in the memory as a HTML file.

35. A method for checking a communication result of a communication apparatus connected to a terminal apparatus via a network, the method comprising:

performing a facsimile transmission to a destination via a telephone network;

storing a communication result file including a communication result of the facsimile transmission performed, into a memory, the communication result file being stored in the memory as a structured document; and

transmitting the communication result file to the terminal apparatus when a request for the communication result file is received from the terminal apparatus, the communication result file being displayable at the terminal apparatus.

36. The method according to claim 35, wherein the communication result file comprises at least one of a communication date, a destination, a number of sheets, a communication duration time and a charge, associated with a communication result.---

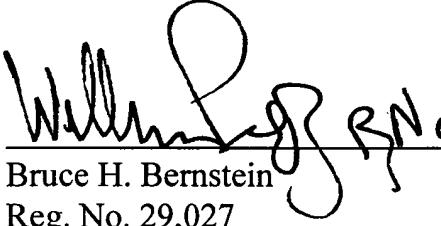

REMARKS

The Examiner is respectfully requested to enter the foregoing amendment prior to examination of the above-identified patent application. The deletion of the existing claims has not been made in view of any prior art and thus no estoppel should apply thereto.

P17948.A11

Should there be any questions, the Examiner is invited to contact the undersigned at the below-listed telephone number.

Respectfully submitted,
Junichi IIDA
